

EMERALD ASH BORER DETECTIONS IN WISCONSIN

Most of Wisconsin remains EAB-free, including much of the northern half of the state and all yellow areas on the map. EAB has been confirmed only in those cities, villages and townships colored green. By limiting the transport of firewood, we can slow down artificial spread of EAB by humans to northern forests and uninfested communities across the state. For more information on what you can do, please visit www.emeraldashborer.wi.gov.

- EAB Confirmed Area
- No EAB Detections
- Tribal Lands
